eSignature Connector

eContracts +

Adobe Sign

Get rid of emailing, scanning, faxing and printing contract documents

OPTIMUS BT
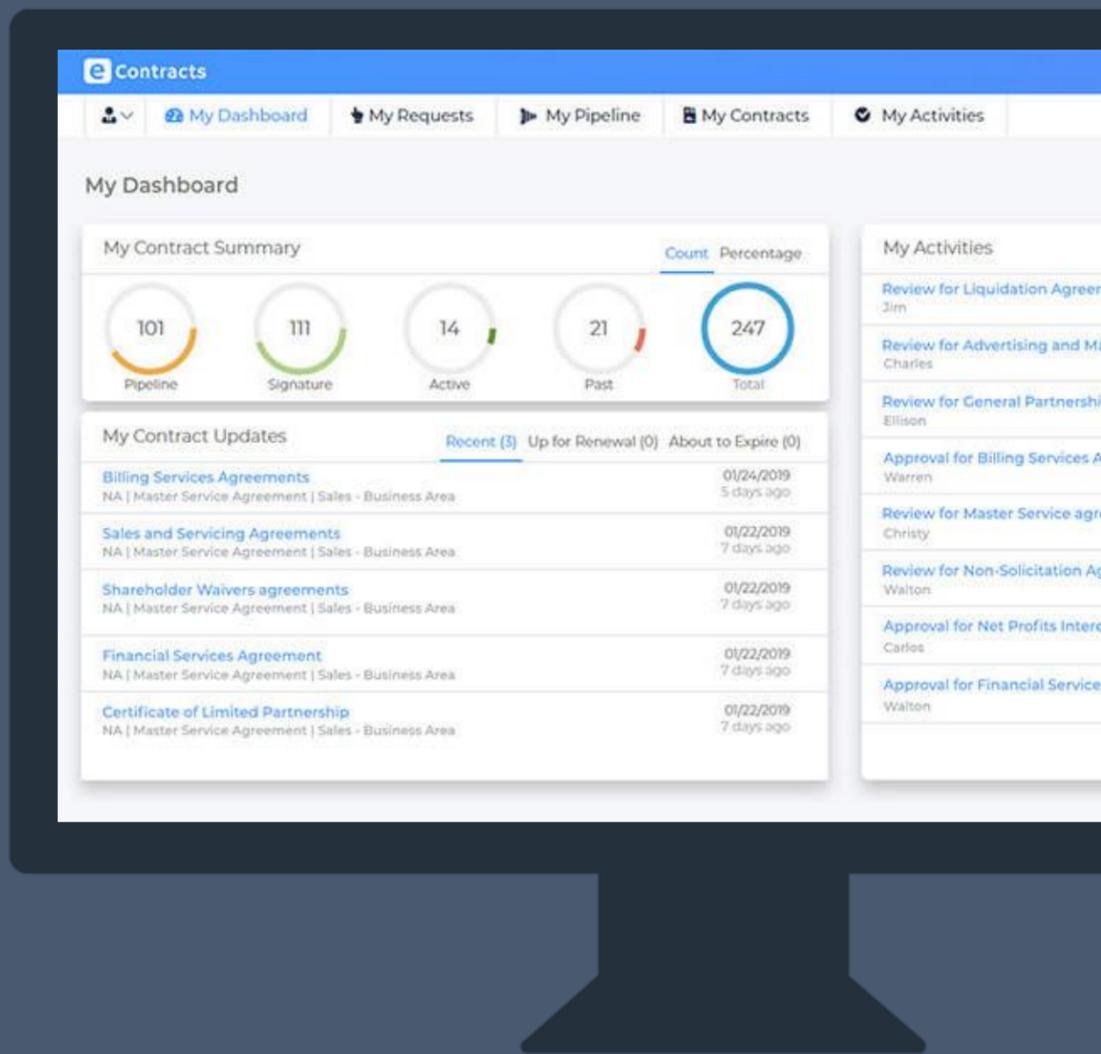

Introduction

eContracts with AdobeSign allows you to easily create a contract document, red-line it, send it for online signature with Adobe Sign and save it in Contract Record for secure storage and sharing.

This document provides an overview of specific capabilities built to bridge key gaps in taking contract lifecycle completely paperless along with shorter turnaround times. The curated selection of features of signature integration on our eContracts platform are as follows

Feature Highlights

Initiate eSignature from Contract Record

Users can initiate the electronic signature process from counterparty contacts managed in eContracts, from the Contract Record interface. Signature Status Tracking automatically captures internal & external signee name, action, email, date and time.
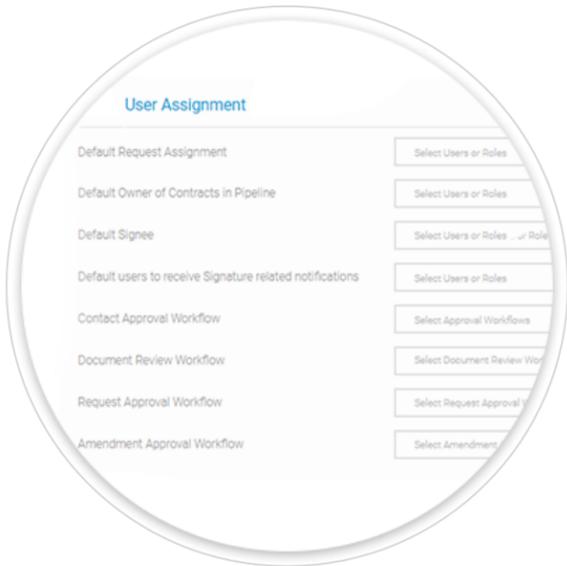

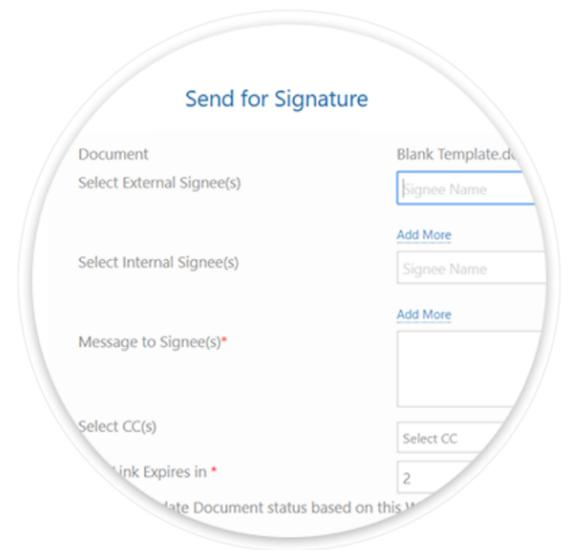

Configuring Contract Area Signees

Get eSignature from multiple signees in preferred order by adding signature placeholders (or just drag and drop) within the document. Protected by e-signature laws around the world and robust, bank-level security.

eSignature Notifications

Emails sent out to recipient inboxes for signing notifications, status updates, and sharing of final signed copy
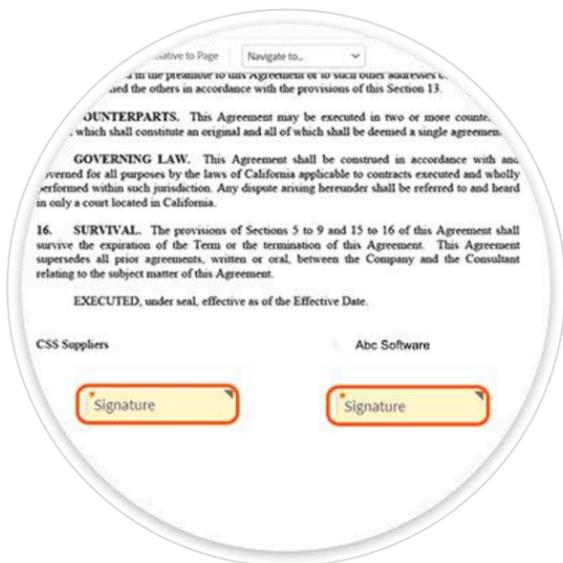

Configuring Signature Blocks

Easily set up easy drag and drop signature boxes in lengthy documents where multiple signatures are required in different sections of contracts

Auto posting of Signed Contracts

Once, the documents is signed, signed documents get attached back to the appropriate eContracts document folder of the contract record in the pdf format and the status gets updated whether signed, declined, or expired.
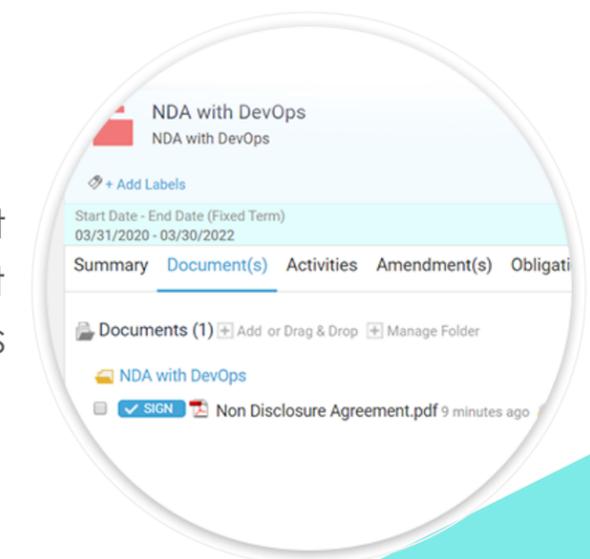

About eContracts

Built on the Microsoft Azure platform, supported by a gamut of cutting-edge cloud services, our Contract Lifecycle, and Discovery products have successfully enabled several mid-sized to large, global organizations tackle today's contract management challenges. The eContracts platform is scalable and flexible to support thousands of sell-side (customer), buy-side (vendor), legal and commercial agreements and is the only CLM product any enterprise would need. Further, with our multiple product editions, services, a wide choice of add-ons, integrations and pre-configured industry accelerators we can configure the solution package to precisely meet your contract management goals

About Optimus BT

At Optimus BT, we leverage powerful capabilities of the Microsoft Azure Cloud and Office 365 technologies to provide enterprise-grade Contract Management software and solutions. Our key offerings include automating workflows, enhancing user collaboration, document and process migration, performance tracking, compliance, discovery and gathering intelligence across contract processes within the enterprise. Over the past 15 years, we have worked with hundreds of legal, IT, procurement and contracts teams to help organizations across verticals including to some big names in the Lifescience, Healthcare, Energy, High-tech Engineering, Education and Financial Services industries. Our product platform natively supports integrations with Salesforce, SAP Ariba, SharePoint and Office 365 suite of products including Teams, Word, Outlook and SharePoint Online. We are based out of Atlanta, GA, US, and our engineering office is located in Bangalore, India.
